

SUNG JUNG

QA ENGINEER | TEST AUTOMATION | OPERATIONS SYSTEMS

Gardena, CA | 949-300-1641 | sungjung0616@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

QA and operations professional with shipped-title game QA experience and a track record of improving real business workflows through practical automation. Contributed to *Eternights* development and PlayStation release QA, reduced a recurring regression cycle from approximately eight hours to four, and built Python-based order automation that reduced daily preparation from about three hours to thirty minutes. Combines manual testing, data validation, workflow design, and cross-functional problem solving with a B.S. in Computer Science.

CORE SKILLS

Quality Engineering: Manual Testing, Regression Testing, Functional Testing, Release Validation, Test Case Design, Defect Reporting, Localization QA, Result Review

Automation & Programming: Python, JavaScript, Google Apps Script, Unity Test Framework, Selenium (personal/technical projects)

Development & Data: HTML, CSS, React, Node.js, Git, GitHub, SQL (basic), PostgreSQL, MongoDB

Operational Systems: Extensiv WMS, Workpad OMS, Shopify, Excel, Google Sheets, ECOUNT ERP (basic)

PROFESSIONAL EXPERIENCE

Operations Manager - Account & Warehouse Operations | GPS Logix | Compton, CA | 2024 - Present

- Helped establish a new 3PL operation, including account-specific warehouse locations, picking and packing flows, work instructions, and daily execution across Extensiv WMS and Workpad OMS.
- Designed an Excel-based SKU batching workflow to reduce unnecessary picking travel, then translated the requirement and partnered with the AcrossB development team until automated SKU separation was added to Workpad.
- Support a team operation that grew from approximately 3,000-3,500 daily orders at launch to about 11,000 typical daily orders across roughly 10 client accounts; coordinate a high-volume account and surface inventory and order risks.
- Implemented an AI-assisted Gmail, Google Sheets, and Apps Script workflow that classifies account communications, records inbound/outbound information, and distributes a daily operational summary.
- Built a scanner-based returns workflow in Google Apps Script that uses tracking and lot inputs to populate SKU and expiration data, reducing repetitive manual entry.

QA Engineer | Studio Sai | Remote from South Korea | Dec 2021 - May 2024

- Supported development and PlayStation release quality for *Eternights* through gameplay, functional, regression, and release-focused testing in a fast-moving production environment.
- Authored reproducible defect reports, reviewed results, validated fixes, and collaborated with developers to identify regressions and clarify expected behavior.
- Reduced a recurring end-to-end regression workflow from approximately eight hours to four by using developer-provided save states and checkpoints to remove redundant traversal while preserving validation coverage.
- Used Unity Test Framework features in the existing development environment for UI-focused automated validation alongside manual and regression testing.

Database Manager | GPS Logix | Carson, CA | Jun 2016 - Nov 2021

- Analyzed a recurring Coupang order workflow and built Python/openpyxl automation to map, normalize, validate, and prepare marketplace data for the GPS shipping-system upload format.
- Reduced approximate daily processing time from three hours to thirty minutes while retaining human review and final system upload control.
- Validated customs and contact fields, normalized postal and product data, handled options and bundle quantities, and separated incomplete or suspicious records for manual review.
- Identified recurring address and customs-document risks and helped strengthen pre-shipment validation requirements before orders entered the international shipping process.

PROFESSIONAL EXPERIENCE - CONTINUED

Owner - Operations & Systems (Part-time) | LAYRD | Los Angeles, CA | Jul 2025 - Present

- Own and co-operate a Shopify-based home and tableware business, with responsibility for storefront systems, fulfillment support, shipping labels, returns, financial records, and business administration.
- Configure and troubleshoot the custom domain, storefront connections, shipping setup, and customer-facing functionality; share order fulfillment and take primary ownership of returns processing.
- Maintain transaction and expense records, prepare documentation for CPA review, and independently completed the LAYRD trademark process through registration using AI-assisted research.
- Support local sales through consignment at CLAEDO in ROW DTLA and a display, consignment, and customer-pickup partnership with Baking Room.

SELECTED TECHNICAL WORK

Coupang Order Automation: Python/openpyxl pipeline for mapping marketplace orders, validating critical fields, flagging exceptions, and generating upload-ready shipping data. [GitHub](#)

Portfolio & Case Studies: React portfolio documenting verified QA, automation, 3PL operations, and business-systems contributions with explicit ownership boundaries. [Portfolio](#)

Full-stack Project Archive: React and Node.js learning projects covering authentication, CRUD workflows, API integration, responsive interfaces, and backend-connected applications. [GitHub](#)

EDUCATION & CERTIFICATIONS

Education: B.S. in Computer Science, California State University, Northridge

Certifications: ISTQB Certified Tester - Foundation Level; ISTQB Agile Tester; Microsoft Office Specialist

ADDITIONAL INFORMATION

Target Roles: QA Automation Engineer, Software QA Engineer, SDET, Game QA Engineer, Automation Engineer

Work Style: Ownership mindset, structured troubleshooting, data-driven validation, cross-functional collaboration, continuous improvement
